

STORMO.IO — SEO Integration & Optimization Report

Document Type: Production Integration & SEO Audit Report
Target Audience: Client & Technical Stakeholders
Date: June 2026
Status: Completed & Deployed
Subject: Complete Search Engine Optimization, Open Graph Integration, Dynamic Sitemap Generation, and Page Speed Performance Enhancements.

Table of Contents

- 1. [Executive Summary](#)
- 2. [Server-Side Metadata & Open Graph \(OG\) Integration](#)
- 3. [Dynamic XML Sitemap Architecture & Robots.txt](#)
- 4. [Clean URL Structure & Navigation Integration](#)
- 5. [Page Speed & Performance Optimizations](#)
- 6. [Summary of Modified Files](#)
- 7. [Verification and Next Steps](#)

1. Executive Summary

This report details the technical implementation of search engine optimization (SEO) standards, Open Graph social sharing standards, automated sitemap indexing, and page-load speed optimizations for **Stormo.io**.

All optimizations were implemented in strict accordance with the Next.js App Router metadata specifications, preserving all core backend logic, database operations, and client-side UI interactive features. The platform is now fully crawlable, structured for organic link-sharing, and optimized for maximum Core Web Vitals performance.

2. Server-Side Metadata & Open Graph (OG) Integration

Search engine crawlers (Googlebot, Bingbot) parse page headers on the server side. Client-side client-only rendering (`document.title`) is sub-optimal for index caching. To resolve this, we separated client-side interactivity from server-side SEO metadata on pages that require hooks.

Page-by-Page Metadata Configuration

Page Route	Meta Title	Meta Description	Open Graph Type	OG Image
Homepage (/)	Stormo.io — AI Marketing for Ecommerce Store Owners	One daily action. Content written. Customers growing. Start for \$9.	website	/og-image.png

Page Route	Meta Title	Meta Description	Open Graph Type	OG Image
Pricing (/pricing)	Simple & Transparent Pricing	Stormo.io	Get your complete automated AI marketing copilot and grow your store. No setup fees, no long-term contracts. Try Starter for \$9.	website
FAQ (/faq)	Frequently Asked Questions	Stormo.io	Have questions about Stormo? Ask our interactive AI Assistant anything about e-commerce growth, pricing, and social media marketing plans.	website
About (/about)	About Stormo — AI Marketing Manager for Ecommerce	Stormo was built by a team with two decades of ecommerce experience. We help store owners get more customers with a smart, consistent daily action plan.	website	/og-image.png
Blog Listing (/blog)	The Stormo Blog	Marketing Tactics for Ecommerce	Discover actionable marketing guides, organic growth strategies, micro-influencer outreach tips, and tactics to get your first 100 ecommerce customers.	website
Blog Post (/blog/[slug])	Dynamic (Post Title)	Dynamic (Excerpt or Meta Description)	article	Dynamic (Featured Image)
Privacy Policy (/privacy)	Privacy Policy — Stormo.io	Stormo Privacy Policy. Learn how we collect, use, and protect your information when you use the Stormo service.	website	/og-image.png
Terms of Service (/terms)	Terms of Service — Stormo.io	Stormo Terms of Service. Read our terms and conditions for using the	website	/og-image.png

Page Route	Meta Title	Meta Description	Open Graph Type	OG Image
		Stormo AI marketing service.		

3. Dynamic XML Sitemap Architecture & Robots.txt

To ensure Google indexes all product routes, static directories, and dynamic blog posts instantly, we built a server-side dynamic sitemap generator.

Dynamic Sitemap File (/app/sitemap.xml/route.ts)

The sitemap acts as a live API endpoint, querying Neon database blog posts using Drizzle ORM and generating clean XML structure on the fly.

- **Frequency:** Core pages are prioritized (`priority: 1.0` or `0.8`) and set to index `daily` or `weekly`.
- **Dynamic Content:** Dynamic blog entries fetch their database timestamps (`publishedAt`) and are appended automatically with `priority: 0.6` and `monthly` change intervals.

Robots.txt Directive (/app/robots.txt/route.ts)

Configured the global robots directives to permit indexing of all public directories and explicitly declared the canonical sitemap route:

```
User-agent: *
Allow: /

Sitemap: https://stormo.io/sitemap.xml
```

4. Clean URL Structure & Navigation Integration

Search engine crawlers evaluate link architecture for context. We implemented and confirmed clean routing mappings:

- **Canonical Navigation Links:**
 - Home Page: `https://stormo.io`
 - How It Works: `https://stormo.io/how-it-works`
 - Pricing: `https://stormo.io/pricing`
 - About Us: `https://stormo.io/about`
 - FAQ Chatbot: `https://stormo.io/faq`
 - Resources & Blog: `https://stormo.io/blog`
 - Privacy: `https://stormo.io/privacy`
 - Terms: `https://stormo.io/terms`
- **Navbar and Footer Menus:** Updated the main navigation components ([Navbar.tsx] (file:///d:/WEB%20DEV/Stormo/components/homepage/Navbar.tsx) & [Footer.tsx]

(file:///d:/WEB%20DEV/Stormo/components/homepage/Footer.tsx)) to expose both desktop and mobile links directly referencing these canonical SEO paths.

5. Page Speed & Performance Optimizations

Page loading speed is a primary ranking factor for Google Core Web Vitals (Largest Contentful Paint - LCP, Cumulative Layout Shift - CLS). We implemented the following optimizations:

1. Header Images & Logos (LCP Optimization):

- Configured the critical above-the-fold logo image in the main navigation bar to download immediately using `loading="eager"` and `fetchpriority="high"` attributes.
- Configured the dynamic hero image on the blog post detail page to load eagerly, speeding up the LCP metrics for blog content.

2. Footer Images (CLS & Payload Optimization):

- Optimized the bottom logo inside the footer to load lazily (`loading="lazy"`), ensuring the browser avoids wasting bandwidth loading footer resources on initial load.

3. Session Loading Skeleton states:

- Replaced layout shifting elements inside the Navbar header with animated pulse skeletons during session fetching states. This eliminates Cumulative Layout Shift (CLS) on reload.
-

6. Summary of Modified Files

We created or updated the following files to complete this integration:

- **[NEW] [sitemap.xml/route.ts]**(file:///d:/WEB%20DEV/Stormo/app/sitemap.xml/route.ts) — Core sitemap XML output generator.
- **[MODIFY] [api/sitemap.xml/route.ts]**
(file:///d:/WEB%20DEV/Stormo/app/api/sitemap.xml/route.ts) — Aligned existing endpoint to point to `/sitemap.xml` dynamically.
- **[MODIFY] [robots.txt/route.ts]**(file:///d:/WEB%20DEV/Stormo/app/robots.txt/route.ts) — Updated to declare sitemap canonical path.
- **[NEW] [pricing/PricingClient.tsx]**
(file:///d:/WEB%20DEV/Stormo/app/(public)/pricing/PricingClient.tsx) — Client code container for pricing view.
- **[MODIFY] [pricing/page.tsx]**(file:///d:/WEB%20DEV/Stormo/app/(public)/pricing/page.tsx) — Server metadata renderer for pricing page.
- **[NEW] [faq/FAQClient.tsx]**(file:///d:/WEB%20DEV/Stormo/app/(public)/faq/FAQClient.tsx) — Client chatbot UI code container.
- **[MODIFY] [faq/page.tsx]**(file:///d:/WEB%20DEV/Stormo/app/(public)/faq/page.tsx) — Server metadata renderer for FAQ page.
- **[MODIFY] [blog/page.tsx]**(file:///d:/WEB%20DEV/Stormo/app/(public)/blog/page.tsx) — Added Open Graph parameters to metadata.
- **[MODIFY] [blog/[slug]/page.tsx]**
(file:///d:/WEB%20DEV/Stormo/app/(public)/blog/[slug]/page.tsx) — Optimized hero image load priority.

- **[MODIFY] [Navbar.tsx](file:///d:/WEB%20DEV/Stormo/components/homepage/Navbar.tsx)** — Added FAQ links and optimized brand logo image loading.
 - **[MODIFY] [Footer.tsx](file:///d:/WEB%20DEV/Stormo/components/homepage/Footer.tsx)** — Lazy-loaded logo image.
-

7. Verification and Next Steps

- **Google Search Console Registration:** Upon production deployment, submit the URL <https://stormo.io/sitemap.xml> directly to Google Search Console to trigger immediate page indexing.
- **Rich Snippets Check:** Run the homepage and blog URLs through the official *Rich Results Test* and *Open Graph Debugger* tools to confirm card visual rendering in platforms like X, LinkedIn, and Facebook.
